EEAP 282 INTRODUCTION TO MICROPROCESSORS

COURSE OUTLINE

Торіс	Class notes	Ford & Topp,
		2nd Ed.
Informational (1 lecture)		
a. Course syllabus	1-4	
b. grading policies	5	
c. CWRUnet ethics code	6-8	
d class notes	9	
e. CWRUnet	10	
1. connecting via PPP		
2. connecting to the Kern Lab		
f. Where microprocessors came from	11	
Number systems and computer math (3 lectures)		
a. representing numbers in binary	12	16-17
b. decimal-binary conversion, flow charts	12-18	17-19,21-22
and pseudo code		,
c. binary fractions, hexadecimal	19,20	17-18
d. binary arithmetic, carrys, and overflow	21-23	24-25
e. fixed length binary numbers, 2's	24-25	25-37
complement numbers		
f. signed overflow, sign extension	26-32	37-45
g. representing characters in binary	33	45-47
h. logical functions	34-35	51-53
UNIX (1 lecture)		
a. commands	37-38	
b. file structure	39-43	
c. help	44	
d mail	45	
e. news	46	
f. vi editor	47-49	
Basic computer architecture & operation (3		
lectures)	53-54	
a. fetch-execute cycle	55	59-61
b. CPU	56-57	61,64-65
c. memory	62	61-64
d. bus		66-68
e. program counter	60	
f. instruction coding	61	

the 69	2000 microprocessor architecture (2		
the oc	000 microprocessor architecture (2 lectures)		
-	basic 68000 architecture	58	73-74
	68000 register set	59	75-78
	memory organization	62	74-75
	basic 68000 machine code	63-65	79-80
u.		03-05	79-00
0	programming MOVE, ADD, SUB instructions	66-68	80-83
	disassembly of instructions	69-73	90-92
		74-77	90-92
-	Programmer's Reference Manual	79-83	87-90
	extension words, machine cycles	79-03	07-90
Dasic	68000 assembly language programming		
-	(3 lectures)	70	
	the debugger	78	100 104
	Example: simple program		102-104
	68000 programming syntax	00.05	104-107
	assembler directives	90-95	107-112
e.	the Status Register	84-89	149-153, 643-
<u>،</u>		00.07	646
	how to run programs	96-97	112-118
g.	Example: how to assemble, link and	98-110	
A du co co	debug a program		
Advar	nced 68000 assembly language		
	programming (8 lectures)		
a.	addressing modes	111 100	110,100
	1. direct, immediate, absolute	111-122	119-123
	2. address register direct	123-126	123-126
	3. address register indirect	127-135	126-128, 213-
h		100 140	216,223,228
	Example: program w/labels	136-143	100 100
	error messages	144-145,148	136-139
	Examples: programs w/errors	149-151	100 100
	Kern Lab i/o routines	152-154	129-133
f.	simple branching	155-158	153-160
g.	bit manipulation	157	196-197
	structured programming	159	170-174
i.	DBcc instruction	160-165	180-183
j.	signed branching	166-167	164-170
	unsigned branching	155-158	176-178
I.	Example: parity program	168-170	197-199
	Examples	171-177	100 104
	Rotate and shift instructions	178-183	160-164
0.	Examples: rotate & shift	184-194	188-189
р.	Math Instructions	195-199	189-194

-	Evenuela evenetta in atravatiana	000 005	
	Examples: math instructions	200-205	
	s and subroutines (7 lectures)	010 010	017 001
	stack and stack operations	212-213	217-221
	Example: backward echo	214-216	004 000
	Example: RPN calculator	217-219	221-223
	PC relative addressing	220	231-236
e.	MOVEM instruction	221-222,	276-281
		227,251-252	
f.	subroutines	223-225	269-276
-	passing parameters	253,226-235	287-291
h.	recursion	237-238,255-	475-487
		256	
i.	stack frames	239-243	291-296
j.	Example: LINK/UNLK	244-247	296-300
k.	C/Pascal subroutine calling conventions	248-250	465-472
Ι.	jump tables		
m.	Example: display 68000 registers	254	455-465
		257-260	300-302
Syste	ms programming (7 lectures)		
a.	microprocessor states (NORMAL,	261-262	642-645
	EXCEPTION and HALTED.)		
b.	user/supervisor mode, priviledged	262-263	645-648
	instructions		
С.	exception processing	264-266	648-655
d.	Example: trace exception	267-268	673-676
e.	Examples: reset/startup exceptions	269-273	655-659
f.	traps & error handling	274-278	660-664, 676-
			686
g.	Example: single step exception	279-283	689-694
-	Examples: 1010 and 1111 instruction	285-288	664-669
	traps		
Advar	nced Microcomputer Architectures		
	(7 lectures)		
a.	RISC and pipelined architectures		
	40x/60x RISC processors		
	Intel Pentium		
	Texas Instruments TMS320		
.			

The total is 42 lectures with three reserved for in-class exams. This outline is tentative. If more time is spent on certain topics, the time spent on the remaining topics will be reduced.

Textbook:

MC68000 Assembly Language & Systems Programming for the 68000 Family, Second Edition

William Ford and William Topp

This textbook is available from the University Bookstore.

The following references will be available for purchase from the CWRU Electronic stores (3rd floor of Glennan) shortly after school starts:

M68000 Family Programmer's Reference Manual M68000/AC Rev 2 Programmer's Reference Card

Office Hours:

Room 515 Glennan.

Monday & Wednesday 2:30- 3:15 10 minute meetings, Be prepared, be concise. Other times by appointment.

Honor Code:

All students are expected to abide by the CWRU Computing Code of Ethics and Student Code of Ethics. Sharing of ideas and comparison of answers on homework is acceptable, but copied work will not be accepted. In-class exams will be closed book and closed notes unless specifically stated. All work must be your own. Any reasonable suspicion of an honor violation will be reported to the Office of Collegiate Affairs.

Grading Policies:

Homework assignments, quiz due dates, etc. will be assigned via email and bulletin board. Failure to read your e-mail will not be an acceptable excuse. Assignments will be due at 5PM on the specified day. Late assignments will be penalized 10% per day late (weekends and holidays will not be counted for penalty purposes). Solutions will be posted on the Web. No student who fails to turn in two programming assignments without supporting evidence (medical excuse, etc.) will pass the course. Handing in an assignment late or incomplete is better than not doing it. Appropriate exceptions will be made for network and other computer failures. Grade Changes:

A student requesting that the grade of an assignment or exam problem be reconsidered must provide the instructor with the following information <u>in writing</u> within two class periods after the work is returned to the class:

- 1. The number of the problem(s) to be reconsidered;
- 2. A description of your mistakes made in the problem(s); and
- 3. The reason that you feel that you should receive additional points for the problem(s), i.e. material the instructor did not see that was on the exam or homework paper.
- Note: The entire exam or homework may be reconsidered by the instructor at this time.

<u>Grading</u>

This course uses outcome based grading. You are expected to show a minimum competency in computer usage (including CWRUnet and the Web), as well as competency in microprocessor architecture and programming. Your grade will be based upon the following scale. A modest number of extra credit assignments may be made throughout the course of the semester.

Total points >90%	Α
Total points >80%	В
Total points >70%	С
Total points >60%	D

Tentative Lab Assignments and due dates:

1. Learning to use the lab hardware/software	September 12th*
2. 68000 instructions and the SR	September 19th*
3. polled i/o	October 6th*
4. packet construction	October 17th*
5. floating point division routine	October 31st*
6. exception driven time sharing kernel	November 17th*
7. unimplemented instruction	December 1st*

NOTE: These labs may be replaced with others at my discretion.

<u>EXAMS</u>

ALL regular exams will be <u>closed book</u>, <u>closed notes</u>. Students will ONLY be allowed to use the 68000 Microprocessor Programmer's Reference Manual and Programmers Reference Card during exams; no other reference materials will be allowed.

GRADING POLICY

Exam #1	12%	September 26th*
Exam #2	12%	October 15th*
Exam #3	12%	November 12th*
Exam #4	12%	December 5th*
Programming assignments	30%	
Computer Quizzes†	22%	

†These are open book exams which will be adminstered and graded over the Web. This is an experimental component of the class. We plan to have the on-line quizzes ready shortly and will use the tentative schedule for quizzes:

Quiz #1	September 10th
Quiz #2	September 15th
Quiz #3	September 22nd
Quiz #4	October 6th
Quiz #5	October 17th
Quiz #6	October 24th
Quiz #7	November 3rd
Quiz #8	November 10th
Quiz #9	November 21st

* All dates are tentative and subject to change.

The teaching assistants are:

Kapil Sharma kxs81@po.cwru.edu

Michael Bristow Mcbristow@aol.com

Wenhui Zhao

Information Services Ethics Policy

CWRU Information Services Ethics Policy

June 1996

General Principles

Access

Access to computers, network facilities, information services and resources owned and operated by Case Western Reserve University imposes certain responsibilities and obligations and is granted subject to University policies, and local, state, and federal statutes. Access to the University's computers, network facilities, information services and resources is granted solely to Case Western Reserve University faculty, staff, registered students, and individuals outside the University who are authorized to use services that have been made available through Case Western Reserve University. The University reserves the right to limit, restrict, or extend access privileges to its computers, network facilities, information services and resources.

Acceptable Use

The University's computers, network facilities, information services can provide access to resources both on and off campus. Such open access is a privilege and requires that individual users act in a responsible and acceptable manner. Acceptable use always is ethical, reflects academic honesty, and shows restraint in the consumption of shared resources. Acceptable use demonstrates respect for intellectual property, truth in communication, ownership of data, system security mechanisms, and individuals' right to privacy and freedom from intimidation, harassment, and unwanted annoyance. The University considers any violation of acceptable use principles or guidelines to be a serious offense and reserves the right to test and monitor security, and copy and examine any files or information resident on University systems allegedly related to unacceptable use.

Disciplinary Action

Those who do not abide by the policies and guidelines listed below should expect at least suspension of CWRUnet network privileges and possible disciplinary action in accordance with University rules for misconduct and existing judicial, disciplinary, or personnel processes. Offenders may also be subject to criminal prosecution under federal or state laws, and should expect the University to pursue such action.

Notification of Possible Misconduct

CWRUnet Services should be notified about violations of Information Services Ethics Policy, laws, as well as potential loopholes in the security of the University's computers, network facilities, information services and resources. The user community is expected to cooperate with CWRUnet Services in its operation of the University's computers, network facilities, information services and resources as well as in the investigation of misuse or abuse.

Guidelines

Standards of Conduct

The general standards of conduct expected of members of the Case Western Reserve University community also apply to the use of the University computers, network facilities, information services and resources. These facilities and resources include:

- wiring or infrastructure used for communications;
- electronics, digital switches and communication equipment used for processing or communications;
- programs, programming languages, instructions, or routines which are used to perform work on a computer;
- digital information such as records, images, sounds, video or textual material stored on or accessible through a computer;
- computers used for automation or the administration of information services;
- information such as CWRUnet IDs, authorization codes, account numbers, usage and billing records, or textual material stored on or accessible through the network or other communication lines.

Property Rights

University computers, network facilities, information services and resources are made available to individuals to assist in the pursuit of educational goals. In order to promote the most effective use of these, it is expected that users will cooperate with each other and respect the privacy of information even though it may be in electronic form rather than printed form. Individuals and organizations will be held no less accountable for their actions in situations involving University computers, network facilities, information services and resources than they would be in dealing with other media.

Though some of them are intangible, these University computers, network facilities, information services and resources are the property of the University. Rules prohibiting theft or vandalism apply to authorization codes, long distance

telephone services, television signals and service information as well as to physical equipment.

Conduct which violates the University's property rights with respect to University computers, network facilities, information services and resources is subject to University disciplinary action. This conduct includes:

- using University computers, network facilities, information services and resources for purposes other than those intended by the University body granting access to those resources (especially using them for personal financial gain or allowing access to them by unauthorized persons even if they are members of the University community);
- using any portion of University computers, network facilities, information services and resources for the purpose of:
 - copying University-owned or licensed information to another computer system for personal or external use without prior written approval;
 - attempting to modify University-owned or licensed information (including software and data) without prior approval;
 - attempting to damage or disrupt the operation of computer equipment, communications equipment, or communications lines;
- knowingly accepting or using University owned or licensed information (including software and data) which has been obtained by illegal means;
- from a single CWRUnet faceplate, receiving more than one set of television signals or distributing these signals to multiple receivers;
- knowingly accepting or using television signals which has been obtained by illegal means.

Confidentiality

The University seeks to protect the civil, personal, and property rights of those actually using its computers, network facilities, information services and resources and seeks to protect the confidentiality of University records stored on its computer systems. The University also seeks similarly to protect those computers, network facilities, information services and resources of other institutions to whom University personnel have access via the University computers, network facilities, information services and resources. Conduct which involves the use of University computers, network facilities, information services and resources and resources to violate another's rights is subject to University disciplinary action. This conduct includes:

• invading the privacy of an individual by using electronic means to ascertain confidential information, even if an individual or department inadvertently allows access to information;

- copying another user's information without the permission of the owner, even if it is readily accessible by electronic means;
- knowingly accepting or using information which has been obtained by illegal means;
- abusing or harassing another user using the University computers, network facilities, information services and resources.

Accessibility/Use

Some of the University computers, network facilities, information services and resources require that each user have a unique identity (i.e. CWRUnet ID, telephone long distance authorization code). The identity is used to represent a user in various University computers, network facilities, information services and resources activities; to provide access to certain University computers, network facilities, information services and resources based on his/her credibility and purpose for requiring such access; and to associate his/her own service use and information with his/her identity. As such, this identity is another instrument of identification and its misuse constitutes forgery or misrepresentation.

Conduct which involves inappropriate access or misuse of University computers, network facilities, information services or resources and service identities is subject to University disciplinary action. This conduct includes:

- allowing another individual to use ones unique identity;
- using another individual's identity, even if the individual has neglected to safeguard it.
- using the University computers, network facilities, information services or resources in the commission of a crime;
- gaining access to non-public computers, network facilities, information services and resources.

Case Western Reserve University's computers, network facilities, information services and resources are networked on the CWRU campus and to other locations. Information on the University's networks and communication lines is considered to be private. Tapping the University's network or communication lines for the purpose of examining or using information other than that destined for the intended user is considered unacceptable conduct and is subject to disciplinary action.

State and National Laws

Conduct in violation of the principles set forth above, with respect to the use of University information services and facilities may be subject to criminal or civil legal action in addition to University disciplinary action. http://cnswww.cns.cwru.edu/phone/phonebook/IS-Ethics96.html

There are several ways to access course resources. All necessary class resources can be found on the EEAP computer cluster located in the Kern Computer Lab (Glennan 519A). All EEAP 282 students will be provided accounts on these machines and will be given physical access to this lab. Please note that computer accounts and physical access will not typically be operational until the second week of classes. Physical access is controlled through the magnetic coding on your CWRU IDs.

Class notes and materials can be found using an Internet browser at http://dumbo.eeap.cwru.edu. Because the Kern computer lab is in the process of being upgraded there will be some changes in where notes are found and where class resources can be accessed or downloaded. These changes will be announced in class and posted on the course Web pages as they occur.

For people using a Web reader such as Netscape or Mosaic the CWRU home page is at: http://www.cwru.edu/

The EEAP Department home page is at: http://dumbo.eeap.cwru.edu/dept/

The EEAP 282 home page is at:

http://dumbo.eeap.cwru.edu/dept/courses/282/eeap282. html

EEAP 282 - Introduction to Microprocessors
Course Syllabus and Administrative Notes Class Notes
Lab Handbook
Open Discussion 282 News Group - Assignments can be found here. Use this area for questions too!
Document: Done

The EEAP 282 notes are at:

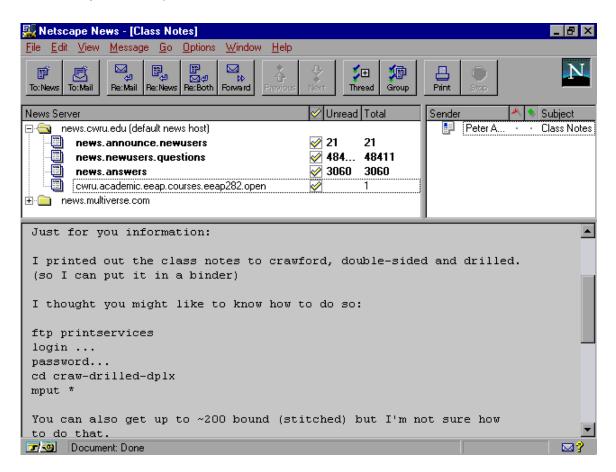

http://dumbo.eeap.cwru.edu/dept/courses/282/00_eeap282_note s.html

You will need to get a web browser such as Mosaic or Netscape working immediately. You will also need a network newsreader such as tin or NewsWatcher.

The official EEAP 282 newsgroup is

cwru.academic.eeap.courses.eeap282.open

which you should use for all postings (except personal and grade related questions).

Connecting to the Kern Computer Lab:

There are basically four means of accessing the Kern Computer Lab.

- 1. World Wide Web this is the method for accessing class notes, labs, announcements and various software. The URL is http://dumbo.eeap.cwru.edu/eeapdept/courses/282/
- 2. CWRUnet from the dorms and other CWRU locations. You can directly connect to the Kern Lab computers using either a telnet connection (recommended for most students) or an X-windows connection. Telnet software should have come with your CWRUnet installed software or is available from the various CWRUnet software sites. With this software you can log into the Kern Lab using your EEAP 282 account. Accounts and passwords will be provided to you. Note that only the machines "flounder" and "scuttle" should be used for this class.
- 3. Many students want to connect to the Kern Lab from their homes using either PPP or SLIP connections. CWRU currently supports PPP sessions. Specific information can be obtained at http://cnswww.cns.cwru.edu/net/software/ Telnet access is also available through 368-8888.
- 4. Physical access to the Kern Lab. The Kern Lab computers will be available 6am to 2am most days. Registered EEAP 282 students will have electronic access to the Kern Lab and can physically use the computers. These machines have 17" color monitors and there is a local high-speed laser printer for your use. The EEAP student lounge (with vending machines) is also located on the same floor.

Connecting to CWRUnet via PPP and SLIP

http://cnswww.cns.cwru.edu/net/software/

Please select the operating system (kind of computer) you use, and how you connect to CWRUnet. People with direct connections (Ethernet or ATM), please pick "On-campus". If you use PPP over a modem, pick "PPP".

- Macintosh or MacOS
 - <u>On-campus</u>
 - <u>PPP</u>
- Microsoft Windows95
 - <u>On-campus</u>
 - <u>PPP</u>
- Microsoft Windows NT
 - <u>On-campus</u>
- Microsoft Windows 3.1 and 3.11
 - <u>On-campus</u>
- Microsoft Windows for Workgroups 3.1 and 3.11
 - <u>On-campus</u>
- MS-DOS without Microsoft Windows (for old 286 & XT only)
 - <u>On-campus</u>
 - <u>OS/2</u>

For the Macintosh you will need to install PPP, available from the software library.

Special classes on setting up this software will be held for EEAP 282 students on an as needed basis. For remotely accessing the Web notes you will need a PPP connection; however, for electronic mail and running the course software you will only need a telnet session. Our experience has been that access to CWRUnet through the TS-2 server has been highly reliable. To use this method simply use a terminal program on your computer and dial 368-8888. You will be prompted for your CWRUnet id and password. When this is completed you can simply type dumbo and you will be connected to the Kern Lab computers where you will be asked for your EEAP 282 account name and password. In general, these will be the same although you may change your passwords.

READING ASSIGNMENT: F&T Chapters 1 & 2

HISTORY OF MICROPROCESSORS:

In 1969 Datapoint Corp. (which made terminals) designed a very simple programmable controller to operate their terminals and contracted Texas Instruments and Intel to make it for them. The Texas Instruments version never worked. The Intel version worked but ran 10 times slower than Datapoint could use.

Datapoint canceled both contracts. Intel, however, was a small company and wanted to get something out of their effort so they made a few changes to their processor, called it the 4004 (the immediate predecessor of the 8008), and sold it as a programmable logic device. The rest is history.
