The electrical and computer engineering examination is a breadth and depth examination. This means that all examinees work the breadth (AM) exam and one of the three depth (PM) exams. The breadth exam contains questions from the general field of electrical and computer engineering. The depth exams focus more closely on a single area of practice in electrical and computer engineering. The three depth examinations are Computers; Electronics, Controls and Communications; and Power.

### Electronics, Controls, and Communications Depth Module (PM)

II. Electronics

A. Electric Circuit Theory
   1. Small Signal and Large Signal
   2. Active Networks and Filters
   3. Delay
   4. Distributed Parameter Circuits
   5. Nonlinear Circuits
   6. Two Port Theory
   7. Phase Delay

B. Electric and Magnetic Field Theory and Applications
   1. Microwave Systems
   2. Transmission Line Models
   3. Electromagnetic Fields and Interference
   4. Antennas
   5. Free Space Propagation
   6. Guided Wave Propagation

C. Electronic Components and Circuits
   1. Programmable Logic Devices
   2. Programmable Gate Arrays
   3. Solid State Power Devices and Applications
   4. Battery Characteristics and Ratings
   5. Power Supplies
   6. Phase Locked Loops
   7. Oscillators
   8. Amplifiers
   9. Modulators and Demodulators
   10. Discrete Components
   11. Diodes
   12. Circuit Protection
   13. Relays and Switches
   14. Logic Components
      a. Properties
      b. Fan In, fan Out
      c. Propagation Delay
   15. Transistors and Applications

III. Controls

A. Control System Fundamentals
   1. Difference Equations
   2. z-Transform
   3. Frequency Response
   4. Characteristic Equations
   5. Block Diagrams
   6. State Variable Analysis
B. Control System Design/Implementation

1. Compensators
2. Feed Forward
3. Feedback
4. Optimal Control Systems
5. Adaptive Control
6. Computer Control and Monitoring
7. Error Actuated Control
8. Proportional-Integral-Derivative Control

C. Stability

1. Stability Analysis and Design
   a. Nyquist Stability
   b. Root Locus
   c. Bode Diagrams
2. Poles and Zeros
3. Phase and Gain Margin
4. Transport Delay

IV. Communications

A. Communications and Signal Processing

1. Modulation Theory
   a. Linear Modulation
   b. Angle Modulation
   c. Pulse Modulation
2. Correlation and Convolution
3. Fourier Transforms
4. Spectral Properties
5. Signal Processing
6. Digital Transmission
7. Quadrature Amplitude Modulation
8. Personal Communication System
9. Spread Spectrum Modulation
10. Adaptive Filtering
11. Nyquist Sampling Theorem

B. Noise and Interference

1. Signal to Noise Ratio
2. Quantization Noise
3. Noise Figure and Temperature
4. Aliasing
5. Random Variables
6. Error Detection and Correction

Approximate Percentage of Examination

B. Control System Design/Implementation 6%
C. Stability 9%
IV. Communications 30%
Approximate Percentage of Examination

C. Telecommunications

1. Wireless Communications
2. Compression
3. Cellular Communications
4. Optical Communications
5. Circuit and Packet Switching
6. Network Distribution Systems
7. Wireline Communications

TOTAL 100%

NOTES:

1. The knowledge areas specified under A, B, C, ... etc., are examples of kinds of knowledge, but they are not exclusive or exhaustive categories.

2. Each depth (PM) exam contains 40 multiple-choice questions. Examinee chooses one depth exam and works all questions in the depth exam chosen.
